Education

Sep 2024–Mar 2027 (Expected)	Shanghai Jiao Tong University (SJTU) SPEIT; M.Eng. in Electronic Information. GPA: 3.5/4.0. Multimodal learning and embodied intelligence.
Sep 2020–Jun 2024	Shanghai Jiao Tong University (SJTU) SPEIT; French major, with a minor in Information Engineering (IE).

Internship

Mar–Jul 2026	Agibot Robotics — Algorithm Intern - For long-horizon phone-packaging manipulation, implemented DAgger, AWR and ALOE RL post-training on RLinF/G02 with a pi05 base model, achieving 90% success on phone packaging, while completing robot bring-up and establishing a reproducible deployment pipeline. - For whole-body control in wheeled-legged mobile manipulation, collected waist-and-chassis demonstrations and trained relative-position control, validating the wheeled-legged whole-body VLA setting, improving foothold precision and supporting mobile manipulation.
Jun–Sep 2024	Alibaba Cloud — Algorithm Intern Reproduced ViNT and NoMaD and fine-tuned ViNT for visual navigation, identifying a training-data distribution bias toward straight trajectories; augmented turning data and added a loss penalty for predicting straight motion at turns to address this bias.

Research Projects

Apr–Sep 2026 Under Review First Author	Navi-Agent: Unlocalized Monocular Navigation Agent To address motion and position awareness for navigation without localization, proposed a Visual Anchor Graph that supports spatial anchoring, progress verification and recovery from monocular RGB, and deployed the system on multiple real robots and evaluated navigation, progress verification and recovery under different scenes.
May 2025–Jan 2026 RSS 2026 First Author	MVP-Nav: Multi-layer Value Map Planner Navigator To bridge physical geometry and semantic goals in pure-vision navigation, combined VGGT/Grounded-SAM depth-free reconstruction with a Multi-layer Value Map planner, enabling obstacle-aware planning without metric maps and providing a unified representation for semantic and physical reasoning.
Jul 2025–Mar 2026 ECCV 2026 Third Author	RelAfford6D: Relational 6D Affordance Graphs For language-conditioned manipulation of articulated objects, retrieved structured part knowledge, used an LLM for part-level planning, and combined 6D pose estimation with closed-loop execution to enable training-free physical task execution through structured knowledge retrieval, geometric grounding and closed-loop feedback.
CVPR 2026 Contributor	Dejavu: Towards Experience Feedback Learning for Embodied Intelligence Experience feedback augments a frozen VLA policy with retrieved trajectories for post-deployment adaptation.
ICML 2026 Contributor	Recovering Hidden Reward in Diffusion-Based Policies Recovers hidden reward signals from diffusion-policy behavior to improve reliable action generation.
EMNLP 2026 Contributor	Exploring Agentic Tool-Calling Decisions via Uncertainty-Aligned Reinforcement Learning Uses uncertainty-aligned reinforcement learning to improve multi-turn agent tool-calling decisions.

Honor and Awards

SPEIT Outstanding Freshman Scholarship	2020–2021; CNY 10,000.
SJTU Undergraduate Academic Excellence Scholarship	2022–2023, 2023–2024; CNY 1,000 each year.
SJTU Graduate Academic Scholarship	2024–2025; CNY 7,800.

Skills

Programming Languages	Python, PyTorch, JAX, C++, Java, MATLAB; VLA, VLN, agents, world models, real-robot RL. Chinese, English, French.
